*Python installation code* :

1) pkg update && upgrade -y
2) **pkg install python3**
3) **pkg install micro**

Example: micro new_file.py
- **save file with Cntrl+s and exit Cntrl+q**

***How to run code* :**
- ***Python file_name.py***

Run HTML in Termux :

Create folder : mkdir (folder name**)**
Open folder : cd (folder name**)**
HTML file 📁 create : *micro index.html*
Delete code : Use) *> index.html*

Run CSS in 📂
Code: *micro style.css*

Run Js in 📂
Code: *micro script.js*

C & C++ installation code:

Step1). pkg update && pkg upgrade

Step2). **Compiler install -** pkg install clang

Example: *micro hello.c*
Code: *#include <stdio.h>*

```
int main() {
    printf("Hello Ram!");
    return 0;
}
```

Compile: *clang hello.c -o hello*
Run code: *./hello*

Output print :

Hello Ram!

C++ Code :

Example: *micro hello.cpp*

Code: *#include <iostream>*
using namespace std;

```
int main() {
    cout << "Hello Ram! Welcome to C++";
    return 0;
}
```

Compile: *clang++ hello.cpp -o hello_cpp*

Run: *./hello_cpp*

Output print :

Hello Ram! Welcome to C++
